

JOSHUA R. CHAVEZ

Software Engineer | Full-Stack Developer | IT Specialist
Raiderjoshjc81@gmail.com • (424) 366-2394 • [LinkedIn](#) • [GitHub](#)

TECHNICAL SKILLS

Languages	Java, Kotlin, Python, JavaScript (ES6+), TypeScript, C++, SQL, HTML, CSS
Mobile	Android (Jetpack Compose, Room DB, ViewModel, Kotlin), MVVM
Frontend	React, Context API, Responsive UI, Axios, Fetch API
Backend	Spring Boot, Node.js, REST API Design, OAuth2, Firebase Auth, Docker, CI/CD
Databases	PostgreSQL, Room (Android), SQL schema design, query optimization
Cloud/Tools	AWS (EC2/Elastic Beanstalk), Git, GitHub, Swagger/OpenAPI, Gradle, Render, IntelliJ
Testing	JUnit, Postman, Mockito, unit & integration testing
Systems	Windows, Linux, macOS, Active Directory, Microsoft 365
Languages	English Japanese Spanish

EDUCATION

B.S. Computer Science | California State University, Monterey Bay May 2026
Relevant Coursework: Database Design, Software Development, Data Structures & Algorithms, OOP, Mobile Development
Certifications: Google IT Support Professional Certificate
In Progress: AWS Certified Developer – Associate

EXPERIENCE

IT Specialist | California State University, Monterey Bay 2024 – 2026

- Triaged and resolved 20+ support tickets across Windows, Linux, and macOS environments while troubleshooting technical issues and improving resolution times through internal documentation.
- Provided Tier 1 and Tier 2 technical support for 500+ faculty, staff, and students, including hardware, software, MFA, email, Wi-Fi, and network troubleshooting.
- Automated repetitive support tasks using Bash and Python scripts to reduce recurring issues and improve team efficiency
- Documented troubleshooting procedures and system workflows in a knowledge base to help junior staff resolve Tier-1 issues independently

PROJECTS

Recipe Tracker & Meal Planner | [Spring Boot](#) | [React](#) | [Docker](#) | [Firebase OAuth2](#) | [PostgreSQL](#) | [AWS](#) | [GitHub](#)

- Co-developed a full-stack meal planning platform using Spring Boot, React, PostgreSQL, and Docker, deployed on AWS Elastic Beanstalk for recipe management and weekly meal planning.
- Secured REST APIs with Spring Security and Firebase OAuth2, implementing role-based authentication and authorization for user and admin access.
- Designed and documented RESTful API endpoints for users, foods, and meal plans using Swagger/OpenAPI to improve team collaboration and integration.
- Collaborated in a 5-person Agile team using Git feature-branch workflows and peer-reviewed pull requests to maintain code quality and reduce integration issues.

Meal-Match | [JavaScript](#) | [TypeScript](#) | [PostgreSQL](#) | [Node.js](#) | [REST API](#) | [Live Demo](#)

- Designed and deployed a full-stack nutrition tracking application with PostgreSQL, generating personalized meal recommendations based on user-defined macronutrient goals.
- Built a RESTful Node.js backend with modular routing, service, and database layers to support scalable feature development and maintainability.
- Developed a responsive React and TypeScript frontend with real-time updates across desktop and mobile platforms, deployed on Render for reliable production hosting.
